## **DETAILED ACTION**

### ***Request for Continued Examination***

1. The request filed on November 25, 2002 for an RCE based on parent Application No. 09/655,166 is acceptable and an RCE has been established. An action on the RCE follows.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 23 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

4. Claim 23 recites the limitation "the pizza support member". There is insufficient antecedent basis for this limitation in the claim.

### ***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 22-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sinks [Pat. No. 1,054,321] in view of Lang et al [Pat. No. 5,039,535].

Art Unit: 1761

Sinks teaches a method of cooking with device comprising a circular, horizontal, rotatable food support with a central axis of rotation (Figure 1, 8), rotating the food support through a heating chamber multiple times (page 1, lines 73-76), the heating chamber having upper and lower housings which do not extend past the food support (Figure 1, 1); heating members (Figure 2, 2), and the food support being removable (page 1, lines 54-57). Sinks does not recite cooking pizza placed on top of the axis of rotation. Lang et al teach a method of cooking pizza on a rotatable support with the pizza placed over the axis of rotation (column 8, line 57; column 6, line 57; Figure 1, 38). It would have been obvious to one of ordinary skill in the art to incorporate the pizza cooking of Lang et al into the invention of Sinks since both are directed to methods of cooking, since Sinks already included a rotatable food support (Figure 1, 8), since pizza was a popular food item which was commonly cooked on rotatable supports as shown by Lang et al. It would have been obvious to one of ordinary skill in the art to incorporate the motorized drive means (Figure 6, #78, 80, 82) of Lang et al into the invention of Sinks since both are directed to methods of cooking with rotatable food supports; since the drive means of Lang et al can accommodate larger food item, such as pizza, due to its lack of central, protruding shaft; and since a motorized drive would have eliminated the need to manually rotate the food support of Sinks, and thereby reduce the risk of burns to the operator.

***Response to Arguments***

7. Applicant's arguments with respect to claims 22-23 have been considered but are moot in view of the new ground(s) of rejection.
